**WE MAKE BESPOKE,
HIGH QUALITY, HIGH
PERFORMANCE TIMBER
WINDOWS & DOORS
TO SUIT ANY STYLE
OF PROPERTY.**

ENVIRONMENTAL CARE

We are committed to using environmentally friendly practices throughout the manufacturing process. All products are made using FSC® certified timber, sourced from well managed forests.

QUALITY & PERFORMANCE

We use only the finest paint system, timber, hinges and ironmongery. High performance, high security and enhanced weather features mean our windows and doors will perform for years to come.

FRIENDLY & PROFESSIONAL

Our emphasis is on providing a professional and friendly service from concept to completion. Our knowledgeable staff offer design inspiration, technical support, itemised quotations and CAD drawings.

CHOICE & FLEXIBILITY

Our product ranges are carefully designed to include a wide selection of bespoke window and door types. Various designs, finishes and matching ironmongery can be supplied with specialist glazing.

Case Studies

Be inspired by our collection of bespoke product images and case studies showcasing some of our unique projects.

UK Traditional House Award

SASH

Vertically opening Sliding Sash Windows have been a feature of British buildings dating as far back as the Georgian, Victorian and Edwardian periods and still prove ever popular in today's modern homes.

Bereco Sliding Sash Windows have been designed to include traditional features, whilst incorporating modern operation, technology and energy efficiency.

Available in semi concealed spiral balance or cords & weights styles, products are internally glazed, featuring double weatherstrips and cutting edge glazing options. Tested to the highest performance, security and weather rating standards, Bereco Sliding Sash Windows are the ultimate choice for both prestigious new build or replacement situations.

Contemporary Range sash windows offer minimalist lines utilising pencil round mouldings, contemporary horn detail and 24mm double glazed, Argon filled units as standard. Triple glazing can also be incorporated to further increase the overall performance of the window.

Bereco's Traditional Range sash windows offer all the benefits of the Contemporary Range but give added aesthetic value with the use of ovolo and putty bead mouldings and a decorative horn detail.

Heritage Range sash windows complete the Bereco portfolio with a choice of either 4mm single or 14mm SlimLine double glazing. Lambs tongue and putty bead mouldings, a decorative horn detail, slim frame sections and a market leading back to front frame depth of only 140mm make the Heritage sash windows ideal for listed buildings and where conservation approval is necessary.

The Coast is Clear

Bereco supplied Sliding Sash Windows and Lipped French Doors from the Traditional Range for a coastal holiday retreat.

BERECO CAN DESIGN BESPOKE WINDOWS AND DOORS TO SUIT A WIDE RANGE OF COMMERCIAL PROPERTIES INCLUDING HOTELS, RESTAURANTS AND OFFICE SPACES TO MEET SPECIFIC REQUIREMENTS.

Image shows Traditional Range Sliding Sash Spiral Balance Windows and Lipped French Doors. Finish is RAL 9016 Traffic White.

“ I am delighted by both the quality and the appearance of the Heritage Range windows supplied by Bereco. They further enhance the appearance of Glentruim Castle and from an environmental and economical point of view the addition of SlimLine double glazing will most certainly save energy and reduce our heating bills each year. ”

DEIRDRE FALCONER, ESTATE MANAGER, GLENTRUIM CASTLE

TOP IMAGE shows Heritage Range Sliding Sash Cords & Weights Windows with 25mm Georgian bar design and 14mm SlimLine double glazing. Finish is RAL 9016 Traffic White.

BOTTOM IMAGE shows Traditional Range Folding Doors with 25mm Georgian bar design. Finish is RAL 9016 Traffic White.

GLENTRUIM CASTLE

The truly stunning Category B listed Glentruim Castle is situated near to the rivers Spey & Truim close to the village of Newtonmore in Inverness-shire, Scotland. Located at the gateway of Cairngorms, Britain's largest national park, the surrounding breath-taking scenery can be seen from all aspects of the castle.

Dating back to the early 1840's, the castle was originally built by Major Euan Macpherson and today is a privately owned holiday retreat, offering luxury self-catering accommodation.

The beauty and grandeur of the castle makes a striking impact on the surrounding landscape so any renovation works had to be sympathetic to its character.

A W Carpentry Services Ltd worked with the client on the replacement of the original timber windows and doors during the recent refurbishment of the castle.

MAIN IMAGE & RIGHT TOP IMAGE shows Heritage Range Sliding Sash Cords & Weights Windows with 25mm lambs tongue Georgian bar design. Finish is RAL 9016 Traffic White.

BOTTOM RIGHT IMAGES show Heritage Range Sliding Sash Cords & Weights Windows with 25mm lambs tongue Georgian bar design. Finish is dual colour with Walnut 5064 Stain interior and RAL 9016 Traffic White exterior.

An energy survey of the castle concluded that significant heat was being lost through the old single glazed timber windows.

Bereco had previously supplied windows for the walled garden cabin on the Glentruim Estate and Deirdre, the Estate Manager, had been impressed with the result. The Heritage Range offered the ideal solution to complement the historic appearance of the castle whilst offering 21st century performance.

Some windows featured are **dual colour** to suit the interior decor.

The SlimLine double glazed units offer low U values to improve energy efficiency whilst retaining the appearance of traditional single glazed windows.

The experienced design technicians at Bereco were able to offer assistance with U value calculations and designed bespoke products to meet the specific requirements of the project.

01.

THE CASTLE FEATURES A MIXTURE OF BESPOKE PRODUCTS, FROM SLIDING SASH CORDS & WEIGHTS DESIGNS TO LARGE SPANNING FOLDING DOORS. ALL HAVE BEEN SUPPLIED WITH MATCHING PROFILES AND SLIM 25MM GLAZING BARS WHICH WERE A SPECIFIC REQUIREMENT OF HISTORIC SCOTLAND.

02.

Impressively, the total refurbishment of the castle took just 1 year from start to finish.

As with all listed buildings, great care had to be taken. Every aspect of the refurbishment had to comply with the strict conservation requirements of Historic Scotland.

It was an essential requirement that the aesthetics of the replacements were closely matched to the original single glazed windows.

Approval was gained for the existing single glazing to be replaced by our SlimLine double glazed units to improve the U values, making them more thermally efficient.

FULHAM BOYS SCHOOL

The Fulham Boys School, located in London, is a Church of England Secondary School for boys which re-opened in September 2014.

Traditional style replacement timber windows were required throughout the school and Sash Windows London were invited to work alongside WS Builders to undertake this challenging window installation of over 130 replacements within a strict timescale.

It was essential that the replacement windows were designed to match the existing timber products in the building as closely as possible to meet the approval of the London Borough of Hammersmith and Fulham.

The Traditional Range was the ideal choice as the windows had to combine period aesthetics to complement the building with high performance features to ensure a suitable school environment for over 500 pupils.

“ We chose Bereco to supply the windows for this project as we know that the product quality and lead times are consistent which was imperative to this project. ”

FRANCESCA COLEMAN-CARR,
SASH WINDOWS LONDON

A variety of bespoke timber windows with a Georgian bar design have been installed throughout the building. Products include large Sliding Sash Windows in spiral balance design with opening fanlights and Flush Casements with a curved head design.

The windows are fully factory finished with extensive warranties and offer low U values providing excellent energy performance.

With a consistent lead time all year round, Sash Windows London could rely on Bereco to supply the windows in time to meet the project deadline.

AS A RESULT OF THE HIGH QUALITY WINDOWS AND INSTALLATION WORK CARRIED OUT ON FULHAM BOYS SCHOOL, SASH WINDOWS LONDON HAVE NOW BEEN INVITED TO QUOTE FOR FULHAM GIRLS SCHOOL.

Entertain in style.

CASEMENT

Bereco Casement Windows can be supplied with either a top hung or a side hung method of operation and are available in lipped or flush designs.

Casements offer excellent weather ratings and a high security espagnolette locking system with friction hinges as standard. Casements are available in contemporary, traditional and heritage profiles.

The Contemporary Lipped Casement with its stormproof design and sleek pencil round mouldings is typical of a 20th century window, perfect for any new build home. In contrast, for a period look, the Traditional Lipped Casement features distinctive traditional ovolo mouldings casement stays and night vents, exclusive to the range.

Flush Casements, available from the Traditional and Heritage Ranges, have a classic flush appearance, traditional mouldings & dummy butt hinges to replicate all the features of a period window.

The heritage profile, with the option of 4mm single or 14mm SlimLine double glazing is suitable for listed properties or those governed by the demands of conservation.

Designed to suit any angle, bow bay windows can be supplied with varying frame widths and curved cills.

Bespoke fanlight with curved lead.

THRUM MILL

Margaret and Dave Hedley bought the Grade II listed Thrum Mill in Rothbury, Northumberland five and a half years ago. For two years the couple worked alongside Channel 4's Restoration Man programme that tracked the mill's gradual transformation. The project has been a true labour of love for the Hedleys as they project managed and completed much of the renovation work themselves.

“ We were delighted with the windows, they look fantastic and everyone at Bereco has been so helpful. We were reassured by their experience and knowledge of Grade II planning restrictions. ”

MARGARET HEDLEY, OWNER, THRUM MILL

Retain period features whilst improving your comfort.

Bereco's conservation approved Flush Casement timber windows from the Traditional Range with Georgian bar design were the perfect choice.

The noise of the river can be quite loud when in full flow and Restoration Man presenter, architect George Clark was fascinated by the effective sound proofing properties the bespoke wooden windows provide.

The Grade II listed building had 29 restrictions in total and strict conservation requirements meant replacing the existing windows presented a huge challenge.

Margaret was keen to ensure as much natural light entered the property as possible whilst framing the picturesque view of the river.

A variety of bespoke bar designs are available across the Bereco range.

“ I have been very impressed by Bereco windows, they are without doubt the best I have seen. I was a bench hand joiner many years ago and would never imagine a finish to be achieved like this from a timber product, they are fantastic. Thanks very much for the professional way in which you dealt with the whole process, it is much appreciated. ”

TILT

Tilt & Turn Windows are one of the most versatile designs used in the market today.

The design flexibility offered by this product with large sashes often means they are used in atriums, orangeries, screens and large glazed areas.

The inward opening windows enable easy cleaning, whilst the tilt mechanism provides ventilation without intruding on internal room space. A Sliding Sash look-alike option with plant on horns is commonly used when other window styles cannot meet fire escape regulations.

The concealed hinge system and customised timber plant on over drainage channels further enhance the products appearance.

Use of double weatherstrips and high security locking systems ensure optimal weather and security performance.

Tilt in, turn in and tilt & turn in window and door options are available in contemporary or traditional profiles with double or triple glazing.

CREATE

The Creative Range is a collection of ultra-modern door designs exclusively crafted using sharp lines and flush panels to create a minimalist appearance.

Creative Range Doors are certified to the latest PAS 24:2012 standards meeting Secured by Design requirements. Thermally insulated panels feature fibre glass reinforcements and aluminium stabilisation layers to ensure the highest level of security and performance.

Available in a choice of 3 veneer finishes; Redwood, Dark Red Meranti and Larch in a variety of paints, stains and dual colour options.

“Bereco were able to match the very specific contemporary door design we had in mind for this very unique property with an Entrance Door from the Creative Range.

The option of a dual colour finish enabled us to match the Entrance Door to the external materials of the property, in addition to the internal doors.”

FRENCH

French Doors or French Windows, as they are sometimes known, can be supplied in single or double leaf configurations with a variety of sidelights, fanlights and panels within the doors, to suit the room design.

Not just an elegant addition to any property, Bereco French Doors also incorporate high security espagnolette locking systems and hinge systems which are adjustable in three directions.

The modern interpretation of a French Door is a lipped design where the door leaf is proud of the frame, whilst the classic one is flush. Bereco offer both types in either inward or outward opening configurations with various threshold options.

Engineered timber reduces movement, particularly on larger sized products such as heavy door systems, in addition 68mm thick door leafs further increase the stability of our doors.

Bereco French Doors are available in Contemporary, Traditional and Heritage Ranges and in a wide variety of glass configurations.

14MM SLIMLINE DOUBLE GLAZING

Retains original aesthetics whilst offering improved thermal performance from that of single glazing.

“ A W Carpentry chose to use Bereco as they could supply Heritage Products with SlimLine double glazing offering the benefits of improved U values whilst aesthetically remaining very close to the original windows, which standard double glazing could not. We had to work within tight parameters set out by Historic Scotland as well as achieving the look and noticeable upgrade in the U value required by the client. Bereco’s Heritage windows set the grounds for the traditional look with help from the technical department customising the detail a little to achieve the original look. ”

TONY WEBB, A W CARPENTRY SERVICES LTD.

LAUREL HOUSE

Mr & Mrs Curran purchased Laurel House in 2011 with the vision of creating their ideal family home. Although the house already had a good number of bedrooms, they wanted to change the position of the kitchen and expand the ground floor space to suit their needs.

The couple decided to extend the property to create a larger living space and commissioned an architect to design a plan to increase ground floor space by 1,100 sq ft. The extension completely transformed the property and new bespoke windows were needed for the new space.

The couple were working with contractor, CTS, based in Goudhurst, Kent who had worked with Bereco on a number of previous projects. Mr Curran took comfort in the recommendation that Bereco would provide high quality, high performance joinery products.

Products for Laurel House were supplied via Parker Building Supplies.

Image shows Entrance Door in traditional profile. Finish is dual colour with RAL 9016 Traffic White frame and Farrow & Ball match 26 Downpipe leaf. Traditional Range Flush Casement Windows with curved fanlight. Finish is RAL 9016 Traffic White. Windows feature silver lead.

Image shows Traditional Range Flush Casement Window with faceted bay and curved cill. Finish is RAL 9016 Traffic White. Windows feature silver lead.

BERECO SUPPLIED BESPOKE ARCHED TOPPED FLUSH CASEMENT WINDOWS, FACETED BAY WINDOWS WITH CURVED CILLS AND ENTRANCE DOORS FROM THE TRADITIONAL RANGE TO PERFECTLY SUIT THE COUPLE'S DESIGN SPECIFICATION.

It was very important that the windows would complement the couple's design vision of creating a Georgian orangery appearance which included a significant amount of stone work and period detailing. The curved design of the building meant it was essential to use a window supplier that could supply made to measure faceted bay windows with matching curved cill detail.

The windows needed to remain in-keeping with the style of the property whilst combining the very latest modern performance features and energy efficiency.

01. Traditional Range Flush French Door and bespoke curved sunburst fanlight with silver lead. Finish is RAL 9016 Traffic White. Hardwood 5064 Walnut stain threshold.
02. Our Flush French Doors are supplied with SFS Easy 3D adjustable hinges for high security and performance, available in brass or stainless steel.
03. Entrance Door in traditional profile with 25mm cottage bar design and Traditional Range Flush Casement Windows with silver lead. Finish is RAL 9016 Traffic White.

Maximise natural light in a traditional building.

profile. Fixed Tilt & Turn glazing screen.
Finish is RAL 9018 Papyrus White.

FOLD

Folding Sliding Doors are the perfect solution to create a seamless transition between indoor and outdoor space. Design configurations are available with up to 10 leafs, spanning up to 10 metres wide and can open up the entire side of a property.

All Bereco Folding Doors are opening out and are available in both contemporary and traditional profiles.

Contemporary Folding Doors offer the perfect way to create an open plan feel to any room and feature a sleek, modern profile with contemporary pencil round mouldings ideal for a new build home.

Traditional Folding Doors incorporate elegant, ovolo mouldings to complement period design features and offer the ideal solution for introducing maximum light into a traditional style property.

Designed to stack from the left, right or with our unique floating door system (both directions), Bereco Folding Doors are supplied with suited ironmongery.

Folding Sliding Door flush bolts are available in four colours.

1. Polished Chrome
2. Black
3. Brass
4. Satin Chrome

Folding Doors Configurations

Bereco Folding Doors are available from 2 to 10 leaves in a variety of configurations and are supplied with drop-bolts, hinges and handles.*

-  Internal Grip Handle Only (No External Handle)
-  Internal Grip Handle & External Handle
-  Floating System

*Designs show opening out and ironmongery is subject to model

THE MOAT HOUSE

The Moat House was built by Allen Dawson's family run timber frame specialist company, Benjamin Allen Bespoke Homes. The Dawsons bought a plot of land in the small picturesque village of Ditchling located at the foot of the South Downs in East Sussex with detailed planning permission for a 300m² house. The Moat House is a stunning Georgian style engineered timber framed home and is Benjamin Allen's flagship design.

Allen took a huge risk and spent a year building this house, which he hoped would advertise his timber frame building skills and help promote and develop his new timber frame family business. Bereco worked in partnership with Parker Building Supplies to supply all the windows and doors for this unique project.

One condition of the planning permission was that the external façade of the building had to be in-keeping with the existing Georgian style architecture in the village. Great care had to be taken when selecting building materials and authentic detailing was essential.

TESTAMENT TO THIS STUNNING BUILD, THE HOUSE WAS FEATURED IN HOMEBUILDING & RENOVATING MAGAZINE.

THE ENTRANCE DOOR FEATURES A GOTHIC BESPOKE BAR DESIGN AND THE HIGH PERFORMANCE SLIDING SASH WINDOWS ALL HAVE GEORGIAN BARS.

“ This project is typical of the type of property we would put Bereco products forward for. Our customers often require a variety of joinery styles, product types and bespoke designs all sourced from the same supplier at the same time. The extensive Bereco product range enables Parker Building Supplies to meet customers design needs whilst offering a high quality product with modern performance features. ”

IAN DEAR, JOINERY SPECIALIST AT PARKER BUILDING SUPPLIES

Image shows Contemporary
Range Sliding Sash Spiral
Balance Windows, Lipped
French Doors, Folding Sliding
Doors and Entrance Door with
16mm Georgian bar design.
Finish is RAL 9001 Cream.

The Dawsons have undoubtedly achieved the main objective of this unique project which demonstrates the detail and quality of the workmanship that is evident at The Moat House. Although this project was a big gamble for Allen and his family it is one that has definitely paid off and the family business is now up and running with great success.

The flexibility of Bereco products makes them the perfect choice for unique builds such as The Moat House which required a high level of detailed bespoke joinery work.

When asked about their 'best buy' for the project Allen and Michelle Dawson said "The wooden sash windows are fantastic and came factory finished in our chosen colour which suits the house perfectly."

With their wealth of specialist joinery experience the Dawson family have undertaken much of the project themselves with Allen and his son Ben completing the highly insulated frame in just three weeks.

SLIDE

Sliding Patio Doors provide the perfect solution for creating vast open plan areas without encroaching on external space or clashing with internal furnishings. This design offers the ideal solution for creating large glazing areas with minimal timber.

A high security espagnolette locking system and night vent position are incorporated as standard to keep your home fully secure. Configurations are available with a span of up to 10 metres and an innovative lift and glide mechanism make the doors easy to operate.

Contemporary Sliding Patio Doors are well suited to new build properties and feature sleek pencil round mouldings and glazing bars for a stylish, modern look.

Traditional Sliding Patio Doors combine elegant, period ovolo mouldings and glazing bars with a modern method of operation offering the ideal choice for a traditional property.

BULLSEYE WINDOWS ADD A UNIQUE DESIGN FEATURE.

AVAILABLE OPENING OR FIXED.

FEATURE

Feature windows are the ideal way to add a unique design statement to any home. They can be supplied in bespoke sizes and a range of finish options allowing you to be creative.

Our technical team can help you to design products individually tailored to your property.

Image shows Contemporary Range Sliding Sash Spiral Balance Windows and fixed Bullseye feature window with 16mm vertical bar design. Finish is RAL 9016 Traffic White.

LARGE SCREENS

Large screens are the perfect way to maximise glazing areas in stairwells, balconies or to open up the whole façade of a property.

They offer the perfect solution to enjoy the views surrounding a property all year round whilst maximising natural light.

RIGHT IMAGE shows Sliding Sash look-alike with a curved head in a Contemporary Tilt & Turn profile with 60mm solid bar & 16mm bespoke curved bar. Image features plant on horns. Finish is RAL 9016 Traffic White.

SHAPED WINDOWS

Our bespoke products can be supplied opening or fixed with a curved head, arched head, bullseye or ellipse shape for a unique finish.

Bereco products can also be supplied curved on plan. It is not only the frame that is supplied curved but the glazing is also curved for maximum aesthetic appeal.

Curved cills can be supplied on both square and shaped products to complement and match the contours of any building.

BESPOKE FANLIGHTS & SIDELIGHTS

A unique feature can be added to any door or window with bespoke fanlights and sidelights designed according to individual customer specification.

ANGLED HEAD

Create an individual finish with an angled head feature window screen, ideal for a gable end or sun room.

Image shows Heritage Range angled head fanlight with 25mm sunburst bar arrangement.

MOULDINGS & BARS

Our exclusive mouldings and bars bring unique character to our Contemporary, Traditional and Heritage Ranges. Frames, sash profiles and bars have been carefully designed with the style of your property in mind.

Contemporary Range products feature pencil round mouldings with contemporary bar designs in 16mm, 25mm, 35mm or a 60mm solid bar.

The Traditional Range features period style internal ovolo mouldings and an external putty style design with the option of a 16mm lambs tongue bar, 25mm or 35mm ovolo bar or a 48mm solid ovolo bar.

Heritage Range products are designed with authentic lambs tongue mouldings and an external putty style design with glazing bars available in 16mm, 25mm, 35mm or a 48mm solid bar.

Bars are supplied in a wide range of bespoke designs including gothic, sunburst and curved bar arrangements.

ALL BEREKO PRODUCTS ARE
INTERNALLY GLAZED AS STANDARD.

Image shows Heritage Range Flush French Doors with 25mm Georgian bar design. Doors feature 14mm SlimLine double glazing and raised & fielded panels. Finish is RAL 9016 Traffic White.

Contemporary Panels

Multi layered insulated panel designs are used to create a raised and fielded detail on Contemporary Range Doors for a modern appearance.

Traditional & Heritage Panels

Sculpted insulated panels are consistent across both the Traditional and Heritage Ranges to create the look of authentic timber door designs.

Contemporary Mouldings

Internal & external pencil round mouldings are a consistent design feature on all products across the Contemporary Range.

Contemporary Internal

Contemporary External

Traditional Mouldings

Internal ovolo mouldings and external putty style design features are consistent throughout the Traditional Range to further enhance the character of any property.

Traditional Internal

Traditional & Heritage External

Heritage Mouldings

Heritage designs incorporate period aesthetics utilising internal lambs tongue profile glazing beads and external putty style design to mirror the distinctive features of original timber windows.

Heritage SlimLine Internal

Heritage Single Internal

Contemporary Bars

The Contemporary Range features pencil round bar designs specifically designed to suit the aesthetics of new build properties. Sizes are available in 16mm, 25mm and 35mm stick on and a 60mm solid bar.

Traditional Bars

The Traditional Range features a selection of lambs tongue or ovolo profile glazing bars available in a range of sizes to suit your design needs. Sizes are available in 16mm lambs tongue, 25mm, 35mm stick on and a 48mm solid bar.

Heritage Bars

The Heritage Range features lambs tongue profile glazing bars available in a range of sizes to suit your design needs. Sizes are available in 16mm, 25mm, 35mm stick on and a 48mm solid bar.

Contemporary Range and Traditional Range glazing bar designs are representative of double and triple glazing. Heritage Range glazing bar designs are representative of single and SlimLine glazing.

THE MEETING HOUSE

The Meeting House is located near the Pantiles, a Georgian colonnade, in the picturesque conservation town of Royal Tunbridge Wells in Kent. Originally built as a chapel in the 18th century, the historic building has since been converted into luxury office space.

Lesters Building Contractors were chosen to replace the original windows and doors due to their significant experience of working on complex conservation projects.

Bereco were able to supply bespoke floor to ceiling feature windows with arched head detail and black painted glazing to replicate the original design. The bespoke nature of Bereco products meant the windows could be individually designed to accommodate varying opening sizes.

Lesters Building Contractors have worked with Bereco for over 10 years and continue to be impressed with the versatility and quality that the product range can offer. Due to the complexity and architectural sensitivity of this project, Glenn Lester had no hesitation in choosing Bereco to supply windows and doors from the Traditional Range.

It was essential that the replacement timber windows and doors remained sympathetic with the historic structure of the building and were in-keeping with the surrounding conservation area.

The windows had to be of a traditional appearance to replicate the existing feature windows whilst offering 21st century, high performance features to improve energy efficiency and reduce heat loss.

“ We have worked with Bereco for over 10 years and have continued to be impressed by the quality of the products and level of service we continue to receive. We worked with Ian Dear, a joinery specialist at Parker Building Supplies, to help us to achieve the required specification.

Nothing seems to beat Bereco, from the arched topped Flush Casement Windows in The Meeting House to the 7 metre wide Folding Sliding Doors we have used in other projects. We go to Bereco with challenging projects and they are able to find the solutions to meet our fenestration needs. ”

Glenn Lester

Lesters Building Contractors

THE BLACK GLAZING PANES ARE DESIGNED TO CONCEAL THE FLOOR JOISTS OF THIS PERIOD BUILDING WHILST ADDING A UNIQUE TWIST TO THE WINDOW DESIGN.

TIMBER & FINISH

All Bereco products can be supplied in softwood or hardwood. The 4-stage finishing process of preservation, basecoat and two top coats give softwood products a smooth finish and hardwood a pitted effect due to its open pore structure.

Engineered or multi-layered timber is used throughout our ranges and products. Opposing grain direction, combined with removal of the natural defects inherent in timber such as knots and shakes help add significant strength to product sections. Safe in the knowledge no defects are located around critical locations, engineered timber is also key to reducing the effects of warp and twist ensuring longevity and performance.

Our high quality product finishes are certified by the BM TRADA Q-Mark Paint Application Scheme. This ensures paint coatings are applied in the correct environment, using the latest manufacturing techniques and machinery by personnel that are trained to the highest standards to ensure product longevity.

FINISHED AS STANDARD.

PAINT IT.*

Introduce a splash of colour with your choice of any RAL, BS and NCS colour.

STAIN IT.*

Our range of 16 translucent stains add colour whilst allowing the natural character, grain and beauty of the timber to show through.

MATCH IT.

We can replicate any colour from the Farrow & Ball range.

FRAME IT.

A contrasting door frame & leaf or window sash & frame finish creates a design statement.

DUAL COLOUR.

Dual paint and stain options are available on both finishes to suit internal décor and external façade.

* Coloured swatch samples are available on request.

GLAZING

The types and specification of glass can have a dramatic effect on the performance of windows and doors, home comfort and heating costs.

The commonly referred to U values give an indication of heat loss; the lower the value, the better the insulation.

The U_w value is the overall U value of the window (frame & glass)

The U_g value is known as a centre pane value (glass only)

Softcoat Low-E glass, warm edge spacers and glazing units filled with inert gases Argon or Krypton dramatically reduce U values on Bereco products.

All double and triple glazed units utilise Softcoat Low-E coatings as standard. This special reflective coating restricts heat exchange between the panes of glass keeping the inner pane warmer.

Insulating warm edge spacer bars around the perimeter glazing eliminate internal condensation caused by the cooling thermal bridge effect. White, black, grey and brown colours are available to complement the product finish.

DOUBLE GLAZING

Available with Argon filled units only, designs offer centre pane U_g values as low as $1.0 \text{ W/m}^2\text{K}$ and overall U_w values of $1.2 \text{ W/m}^2\text{K}$.

TRIPLE GLAZING

Our triple glazed products are available with either an Argon or Krypton filled unit. Excellent centre pane U_g values as low as $0.5 \text{ W/m}^2\text{K}$ and overall U_w values of $0.8 \text{ W/m}^2\text{K}$ can be achieved with Krypton.

FOR ENHANCED SECURITY ALL OF OUR WINDOWS ARE INTERNALLY GLAZED AS STANDARD

Image shows Traditional Range Flush Casement Windows with 25mm cottage bar design. Finish is RAL 9016 Traffic White. Windows feature polished chrome ironmongery.

14MM SLIMLINE DOUBLE GLAZING

14mm SlimLine double glazing offers the aesthetic appearance of single glazing whilst offering improved thermal performance. Krypton filled units with warm edge spacers are supplied as standard. Designs are available with centre pane Ug values of 1.2 W/m²K and overall Uw values of 1.3 W/m²K.

4MM SINGLE GLAZING*

All Heritage Range products can be supplied with 4mm single glazed units, ideal for the most architecturally sensitive projects. Designs are available with centre pane Ug values of 5.8 W/m²K and overall Uw values of 4.5 W/m²K.

ACOUSTIC GLAZING

For many homeowners across the UK, high levels of external noise are of concern. Not only does it cause discomfort in the home but more importantly, recent studies have highlighted a strong link between prolonged exposure to high levels of noise and serious health issues.

Acoustic glazing is available across both our Contemporary and Traditional Ranges and can be used to achieve decibel ratings up to 45dB.

A RATED

Ultra clear low iron glass is available, allowing more heat and light from the sun to enter the room. This solar gain (g value) combined with our low U values mean Bereco products can achieve a BFRC A rating.

*Single glazing does not comply with Part L Building Regs.

SPECIALIST GLAZING

PAINTED GLASS

Add a unique twist and a modern alternative to obscure glazing with a totally opaque finish in a RAL colour of your choice. Ideal for use in screens where floor joists need to be hidden.

COLOURED GLASS

Coloured glass offers a modern interpretation of stained glass. A wide range of colour options can be chosen to accentuate your design.

ANTI SUN GLASS

Anti sun glass is ideal for large glazing areas as it reduces the amount of heat from the sun (solar energy transmittance g value) transmitted through glass, helping create a comfortable room temperature all year round. Available in 4 colour options: blue, green, bronze and grey.

SELF CLEANING GLASS

Self cleaning glass helps keep your windows cleaner for longer, saving both time and money.

MAKE A STATEMENT WITH
LEADED GLASS OR ADD
A UNIQUE TWIST WITH
COLOURED GLASS.

01.

02.

03.

LEADED GLAZING

We can replicate traditional or create completely bespoke lead patterns.

Choose from antique black, silver, gold and old gold coloured lead available in 6mm and 9mm.

BEVELLED GLASS

Bevelled glass is the ideal focal point that can make all the difference to a feature window or door.

The edge of the glass is chamfered at an angle creating an elegant framed look whilst reflecting light to produce a beautiful array of colours.

Please note painted, coloured, anti sun, self cleaning and bevelled glass is not available in obscure glass.

“ We have been working with Bereco for a number of years and would not recommend them to our clients unless we had absolute faith that they would look after them and we have never been let down. Their sales team are very knowledgeable about their product and the technical team work hard to fulfill our exact requirements. They are all a pleasure to deal with and the product is very well made and competitively priced. ”
